

The **Pioneer** VSXAX4ASiS A/V Receiver

FEATURES: 1080p HDMI switching, iLink, iPod® control, THX Select2, AIR Studios tuning

The VSXAX4ASiS is the pinnacle of Pioneer's receiver range. This ultra-high performance 7.1 AV receiver incorporates AIR studios tuning and THX Select2 certification for those who are unwilling to compromise. Featuring 140W x 7ch power, i.Link terminals, 1080p compatible HDMI, iPod control, Faroudja up-scaling chip, and Pioneer innovations such as Phase Control and Standing Wave Control, you will enjoy the benefits of this high quality receiver for years to come.

140W/7 channels power

Powerful sound output from 7 channels. The VSXAX4ASiS can decode and output all currently available sound formats including DTS-ES, DTS 96/24, DTS NEO:6, Dolby PL IIx, WMA9 Pro.

HDMI v 1.2 compatible

The VSXAX4ASiS features four 1080p compatible HDMI inputs and one output for the highest video and audio quality possible. The single cable adds extra convenience to your set up.

iLink digital audio input

Representing the ultimate in digital audio transfer quality, the iLink terminal on-board the VSXAX4ASiS when combined with Pioneer's Precision Quartz Locking System (PQLS) allows industry best levels of jitter when transferring audio from the Pioneer DV989AViS DVD player.

iPod® connectivity

Enjoy your favourite digital tracks, photos and video via the convenient iPod® connection on the VSXAX4ASiS. The supplied cable means you can plug in your iPod®, and the on-screen display offers you access to all the familiar iPod® menus. This connection also charges your iPod®, so you'll never run out of juice!

Advanced MCACC

Pioneer's VSXAX4ASiS allows you to create ideal acoustic environment with ease. The advanced MCACC applies 'Time Axis' in measuring the listening environment's acoustic characteristics and in applying frequency response compensation. This results in a more precise adjustment of frequency response for human ears.

Digital Video Converter

The VSXAX4ASiS allows for easy set up and connection. You can plug-in your existing or new AV components via analogue video connections (composite, S-video, component) and connect the HDMI output from the VSXAX4ASiS to your Pioneer plasma television via a single cable.

HDMI video output will ensure the best picture quality on your Pioneer plasma TV.

Faroudja™ DCDi video upscaling

Whilst digital video conversion is great from an ease-of-use perspective, video upscaling improves picture quality directly by 'adding' more detail to an original video signal. To successfully upscale

a signal in this way, the Pioneer VSXAX4ASiS uses the industry-leading DCDi system developed by Faroudja™ (DCDi and Faroudja are trademarks of Genesis Microchip Inc.)

LCD smart learning remote

Pioneer's remote control is preset to operate a range of home entertainment products. All you need to do is simply enter the corresponding code of your component manufacturer (supplied in the manual) and the Pioneer remote will adopt these controls- no need for multiple remote controls!

What's more, you can enjoy extra convenience with the learning ability of the remote control - commands for home entertainment products which are not preset, can be programmed into the remote control of the VSXAX4ASiS.

Multi-zone, multi-source operation

The VSXAX4ASiS has the flexibility of its predecessors with the ability to use the 7 powered channels to bi-amp or set up a second zone. In addition to this, you can listen to content from multiple devices in different rooms at the same time (Zone 2: audio + video + iPod, Zone 3: audio). Imagine being able to enjoy a surround sound DVD in your lounge and at the same time entertain friends and family with music from your iPod in another area of your house.

SR+ remote

Pioneer's system remote control terminal allows you to control your components via the plasma remote even if they are hidden away in the cupboard.

Another benefit of Pioneer's VSXAX4ASiS receiver is simultaneous audio/video source selection. So when you select DVD for example, both the receiver and your viewing device will receive the same signal.

3 year manufacturer's warranty

Pioneer receivers come complete with a 3-year manufacturer's warranty, so you can enjoy complete peace of mind.

Bonus SR+ cable

SR+ is a unique feature which integrates Pioneer Receivers with your Pioneer Plasma. With SR+ you get the convenience of controlling all your equipment from the plasma itself, whilst enjoying superior video quality. What's more, the receiver can be integrated discreetly into your living room reducing the number of cables required.

Sound Retriever

Every Pioneer AV Receiver now comes with the newly developed Sound Retriever, which significantly improves the sound quality of compressed audio (WMA, MP3, AAC) to the level of CD sound. This Pioneer exclusive technology applies a special algorithm to restore the signals in barely audible ranges, which are eliminated in the compression process.
